Tutorial 3
Posted by allisonbr - 2008/02/22 19:41

_____

I have been working through the tutorials that are a part of the version 1.5 download. In tutorial 3, I have created the mosaic just fine, but when I go to delinate the watershed, the subsequent windows that appear do not match the ones in the tutorial.

I did try to move forward, but I ended up with something that was not usable.

Any comments would be appreciated.

Bruce

_____

Please resend the images. Neither came through. Try pasting them into the message body.

Thanks,
Lainie

_____

Lainie,

The images would not aste directly into the message body. I am attaching them as a smaller jpeg file. I will send two separate messages, each with one attached image

_____

Lainie,

Here is the second image.

_____

Hi,

Your images actually look fine. On the Watershed Delineation form, make sure you fill in the bottom part, Stream Grid Input. This is not described in this tutorial since it was covered in earlier tutorials, but you still have to create the stream grid.

On the bottom of that form, click Create New Stream Grid, accept the defaults, and continue from there.

I hope that helps.

Lainie
